Best Practices FOR EVERY AMERICAN

- HEAT & HUMIDITY SUPPRESS COVID-19**
indoors and outdoors
- MOVE ACTIVITIES OUTSIDE**
sunlight impedes virus transmission
- COMMONLY AVAILABLE DISINFECTANTS (Bleach & Isopropyl Alcohol)**
work to kill the virus

05:55 / 06:54

“We’re also testing disinfectants readily available. We’ve tested bleach, we’ve tested isopropyl alcohol on the virus, specifically in saliva or in respiratory fluids. And I can tell you that bleach will kill the virus in five minutes; isopropyl alcohol will kill the virus in 30 seconds, and that’s with no manipulation, no rubbing — just spraying it on and letting it go. You rub it and it goes away even faster. “
